

Raised Floor Parts & Accessories

The raised access floor system is composed of panel, stringer and pedestal. The stringer and pedestal that are vertically adjustable are connecting with screws, which form the stable bottom bearing. The panel is inlaid in the square lattices enclosed by stringers. There are several accessories used with this system as per requirement. Some of them are as follow:

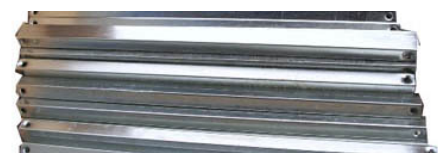

Pedestals:

This pedestal that plated with zinc used for Steel, wooden and ventilation raised access floor, the laying height can often be freely selected in range of 8--30CM and also can meet requirements of different users, the load bearing capacity is not less than 20KN.

Stringers:

Stringer, which is wholly plated with zinc used for Steel, wooden and ventilation raised access floor.

Cable Entrance Sockets:

Cable entrance sockets are available in different shapes and sizes like round, square and big in covered area. These can use for the cable passage across the floor.

Tile Pullers:

Tile pullers are used to lift the tile from fixed access floor.

There are three common types are available:

- ⇒ Single Cup Puller
- ⇒ Double Cup Puller
- ⇒ Tri Cup Puller

Floor Boxes:

Custom floor boxes are made on demand, commonly use to mount power, data and voice outlets in floor.
